DETAILED ACTION

In response to the communication filed on October 13, 2005, claims 1, 3-6, 8 are active in this application and claims 11-24 are withdrawn from further consideration.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 4, lines 2-3, the phrase "said liner layer deposited on the ILD" lacks antecedent basis (note: claim 1 requires depositing the liner layer in the interconnect aperture).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Gopalraja et al., U.S./6,277,249.

Gopalraja et al. disclose a method for forming an interconnect structure, which comprises providing a lower electrical contact including a lower interconnect member 212 (fig. 14);

Art Unit: 2813

depositing an ILD 214 and forming an interconnect aperture 216 therein extending down to make contact with said lower interconnect member (fig. 14); depositing a liner layer 218 in said interconnect aperture (fig. 14); removing said liner layer on at least the bottom surface of said interconnect aperture (fig. 15), thereby exposing a top surface of said lower interconnect member; bombarding (i.e. by sputtering process, etc.) said top surface of said lower interconnect member with ions (i.e. Ar, etc., col. 15, lines 45-57 and col. 17, line 5) such that material is removed from the interface of said lower interconnect member and the bottom surface of said interconnect aperture (fig. 15), thereby forming a second aperture 224 (fig. 15) within said lower interconnect member having a shape with substantially no horizontal surfaces (fig. 15); and depositing conductive material 226 (fig. 15, also see fig. 16 and col. 15) in said interconnect aperture, thereby establishing a joint between said lower interconnect member and an upper interconnect member formed by said conductive material in said interconnect aperture (figs 15-16), see figs. 1-16 and cols. 1-18 for more details.

Re claim 3, the material of said lower interconnect member 212 is selected from the group consisting of Cu, W, Al and other conducting materials (i.e., Cu; fig. 14 and col. 14, lines 1-10).

Re claim 4, due to 112 problems, as best can be understood by the examiner is as following: the material of said liner 218 is selected from the group consisting of TaN, Ta, Ti, Ti(Si)N and W (i.e., Ta/TaN etc., fig. 14 and col. 15, lines 55-65 and col. 4, lines 5-10).

Re claim 5, a gas source for ion bombardment is selected from the group consisting of Ar, He, Ne, Xe, N₂, H₂, NH₃, N₂H₂ (i.e. Ar, etc., col. 15, lines 45-57 and col. 17, line 5).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Allowable Subject Matter

7. Claims 6 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable (claims 6 and 8 are allowed for reasons deemed to be of record) if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2813

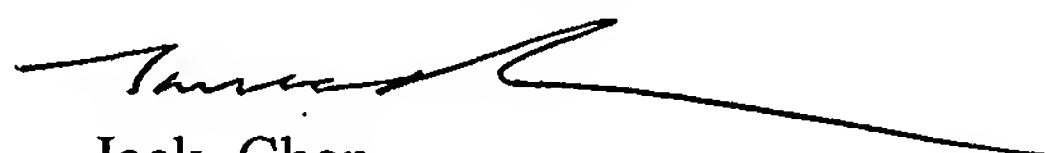

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
